

# GOGO GALILEO HDX ANTENNA

Incredible performance in a small form factor

The Gogo Galileo HDX Electronically Steered Antenna (ESA) is designed to fit under the tail radome of a Dassault Falcon Jet aircraft with highly consistent performance and incredible speeds up to 60 Mbps throughout the cabin.

Purpose-built for business aviation and designed for ease of installation, the Gogo Galileo HDX antenna leverages Eutelsat's OneWeb Low-Earth-Orbit (LEO) satellite constellation to provide low-latency, high-speed connectivity emulating the terrestrial digital experience at altitude.

HDX is the smallest form factor antenna enabling global broadband connectivity via the Gogo Galileo network, with simple cabling connecting the antenna to a Gogo AVANCE L5 or SDR system.

## FEATURES

### Max Speed

↓ 60 mbps  
↑ 11 mbps

### Low Latency

### Aircraft

Optimized for  
Dassault Falcon  
models

### Eutelsat OneWeb

**LEO Network**  
Enterprise grade  
global network

## ALREADY HAVE AN AVANCE ROUTER OR SDR?

For those who already have a Gogo AVANCE or SDR, onboard installation is even simpler and more cost effective with the straightforward addition of a single ESA antenna.

## WHY CHOOSE GOGO?

### Aviation grade equipment

Built for business aviation from the ground up, not adapted from airline systems

### Not just connected, covered

Choosing Gogo connectivity means choosing confidence, not just coverage.

Gogo's white-glove service delivers 24/7 support from experts who live and breathe business aviation, so you're never routed through generic call centers or left troubleshooting alone.

### Private Connectivity

At Gogo, we believe privacy should not be accidental. It should be architectural. We design systems that collect only what's necessary to deliver performance.

- We minimize data retention.
- We protect what's sensitive.
- And we operate with a simple philosophy: If it's not essential to service, it's not our business.
